Science for sustainable seas

*To implement a framework to organize user workflow so that **data**, **methods**, and **results** used in ICES assessments, are easy to **find** and **rerun** later with new data.*

Objectives

TAF is designed to be:

- ▶ **Encapsulated:** entire pathway from input DBs to SAG (and other assessment outputs) in one system
- ▶ **Quality controlled:** data and results can be traced to sources, scripts are organised and well structured, values can be checked
- ▶ **Repeatable:** data preparation and assessment workflow is recorded and can be run
- ▶ **Transparent:** anyone can browse all aspects on the web

Key benefits

- ▶ High **quality** science: online, peer-reviewed, reproducible
- ▶ Improved **time efficiency** and **reduced workload** on EGs
- ▶ Much more **open and structured** than current workflow

System workflow

Core workflow

Analysis

Sharepoint vs. TAF

ICES assessments (input, model, output) are currently archived on [Sharepoint](#). How is that different from [TAF](#)?

Analysis

Assessment on Sharepoint:

may not **exist**

may not **run**

may contain **partial/confusing** information

is **inaccessible** for many clients and the public

unclear where data **came from**

unclear how data were **preprocessed**

may be **different** from final advice

Assessment in TAF:

guaranteed to **exist**

guaranteed to **run**

contains the final model run, in a standard structured format

open for anyone to **browse online**

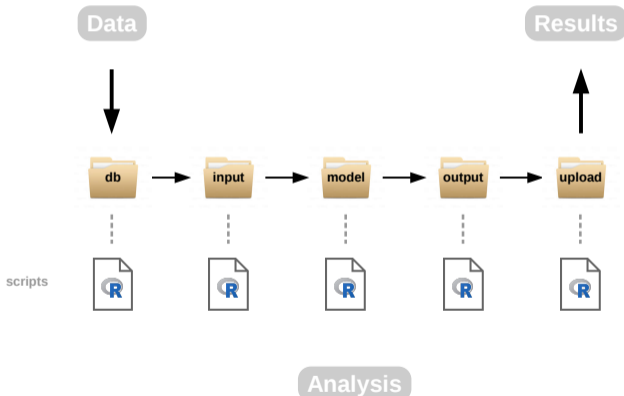

first step explicitly downloads from **data sources**
and **preprocesses** the data

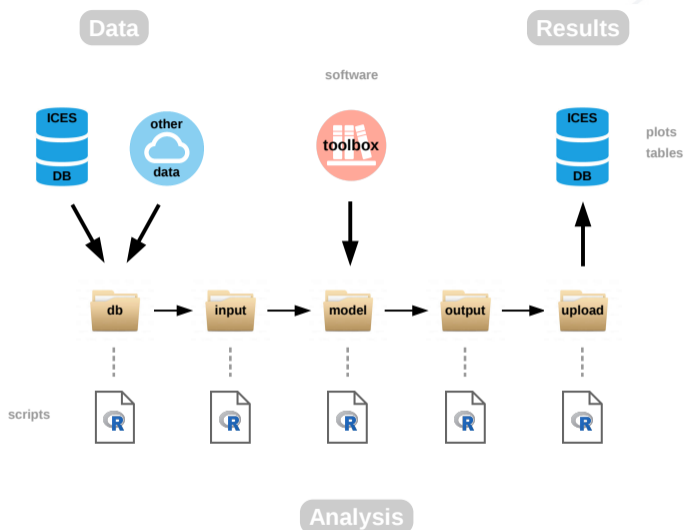

last step uploads results to SAG for final **advice sheet**

Analysis

Complete pathway

User interface

Web user interface

(design outline)

Open taf.ices.dk in a web browser

Browse (everything is open) or **log in** to modify/run assessments

- Stock mode

upload, edit, save, run

- Boss mode

TRANSPARENT ASSESSMENT FRAMEWORK (TAF)

View Assessment Code

StockKeyLabel Year Script Name

Success! Success with: https://raw.githubusercontent.com/ices-taf/2015_rjm-347d/master/model.R.

Code

"Click to show/hide code"

```
## Run analysis, write model results

## Before: input.RData (input)
## After: dls.txt (model)

library(icesAdvice)
library(icesTAF)

mkdir("model")

## Get data
load("input/input.RData")

## Apply DLS method 3.2
i1 <- survey$Index[nrow(survey)-(6:2)] # five year period from n-6 to n-2
dls <- DLS3.2(mean(catch$Catch), survey$Index, i1=i1)

write.dls(dls, "model/dls.txt")
```

TAF (web) services

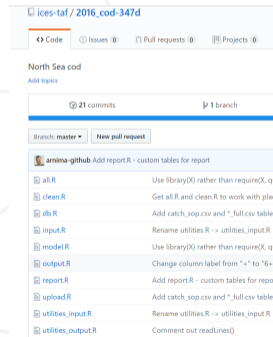

GET data services

- run** get and run TAF code on an ICES server and harvest results
- code** view/download code used in the assessment
- data** view/download data files used in the assessment
- results** view/download results files
- plots** view/download plots (if submitted)
- tables** view/download report tables (if submitted)

POST data services

non-ices-data data / models not currently in ICES system

TAF (web) services

GET data services

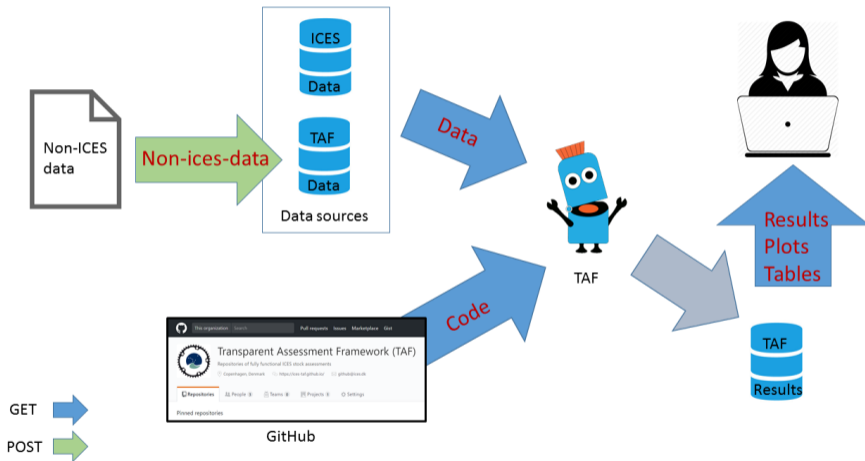

- run** get and run TAF code on an ICES server and harvest results
- code** view/download code used in the assessment
- data** view/download data files used in the assessment
- results** view/download results files
- plots** view/download plots (if submitted)
- tables** view/download report tables (if submitted)

POST data services

- non-ices-data** data / models not currently in ICES system
